SUMMARY

Computer Science and Engineering student with good knowledge in Java, Python, data structures, DBMS, web development, and machine learning. Hands-on experience building full-stack and AI-based projects using FastAPI, React, TensorFlow, and modern development tools. Seeking a software development role to apply problem-solving and engineering skills while contributing to real-world software solutions.

EDUCATION

Bachelor of Engineering, Computer Science and Engineering K.S. Institute of Technology, Bengaluru CGPA: 8.16/10.0 (up to 6th semester)	2023 – Present
Pre-University Education (PUC) SSMRV PU College, Bengaluru 73.5%	2021 – 2023
SSLC Jnana Sweekar Public School, Bengaluru 87%	2017 – 2021

SKILLS

Programming Languages: C, Java, Python, HTML, CSS

Frameworks & Libraries: FastAPI, React, TensorFlow/Keras, OpenCV, JUnit

Core Concepts: Data Structures, DBMS, Computer Networks, Machine Learning

Tools & Platforms: Git, GitHub, Docker, VS Code, Vercel

PROJECTS

Risk-Informed Validation Framework for Java Maven Projects - Built a testing and validation framework that builds a Java Maven project, runs its unit tests, and prioritizes risky classes as HIGH, MEDIUM, or LOW validation priority. - Collected quality metrics with JUnit/Surefire, JaCoCo, PMD, SpotBugs, and CK Metrics; applied Python machine-learning models to estimate class-level defect risk. - Modeled validation activity with a MASON agent-based simulation, evaluated across 12 model-result records over 3 release transitions and 4 model configurations. - Delivered results through a React dashboard backed by a FastAPI service; containerized with Docker and managed with Git/GitHub.	Java, Python, FastAPI, React, Docker
Web Link Analyzer – Detech - Developed a machine-learning web application that detects suspicious and phishing URLs by classifying links using TF-IDF features and Naive Bayes. - Integrated YOLOv8 and Tesseract OCR to analyze phishing screenshots and extract text; built the FastAPI backend returning automated phishing-risk analysis.	Python, FastAPI, TF-IDF, Naive Bayes, YOLOv8
NeuroVision AI – Retinal Image Analysis for Alzheimer’s Risk - Developed an AI-assisted application to estimate Alzheimer’s risk from retinal fundus images using CNN, ResNet, and VGG16 transfer learning. - Implemented OpenCV image preprocessing and generated predictions with confidence/probability information for interpretable output.	Python, TensorFlow/Keras, CNN, OpenCV

CERTIFICATIONS

- Claude Code in Action – Anthropic
- Introduction to Machine Learning – NPTEL, IIT Madras
- Introduction to Computers, Operating Systems & Security – Microsoft / Coursera
- Networking Basics – Cisco Networking Academy

ACHIEVEMENTS & ADDITIONAL INFORMATION

- Participant, Hack2Skill National Level 24-Hour Offline Hackathon – JSS Academy of Technical Education, Bengaluru
- Volunteer, National Service Scheme (NSS) community service and awareness activities; participant in college marathons for social causes

Languages: Kannada, English, Telugu
